                                                                                                                                                                                                                                                                                                                                                                                                                     CC splingosine-1-phosphate lyase (SPL, see AAYOSB27). SPL CDNA was CC obtained by amplification of human fibroblast RNA. SPL CDNA was CC catalyses the cleavage of sphingosine-1-phosphate into inactive CC metabolites. Sphingosine-1-phosphate is an endogenous tumour CC suppressor lipid that potently inhibits breast cancer cell growth CC and invasiveness, while not affecting the growth of non-tumour CC cells. Mouse and human SPL polynucleotides (see AAY2566-67) and CC polypeptides (see AAY05826-29) are claimed. Methods are provided for CC preparing SPL using transformed or transfected host cells. SPL foother compared to transfected host cells. SPL modulate SPL activity. SPL inhibitors will inhibit growth of cancer cells, especially breast cancer cells. SPL inhibitors, including CC polypucleotides preventing expression of SPL genes, or antibodies against SPL, can also be used to prevent the development and/or CC metastasis of cancer, especially where the inhibitor is linked to CC an antitumour or antibostrogen receptor antibody. Detection of CC alteration is a deletion of residues 354-433 of the 568 amino acid CC human SPL sequence (see also AAY05830), can be used to diagnose CC cancer, and to assess the prognosis for recovery.
                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                 CC The present invention describes a method for identifying tumour CC characteristics, comprising measuring a copy number or expression level CC of at least two genes associated with lipid metabolism, synthesis, or CC action in cells from a patient tissue sample, and comparing the results CC with a copy number or expression level of the genes in a normal cell. CC Also described is an array of nucleic acid polymers immobilised on a CC solid support, comprising a solid support, at least two different nucleic CC acid polymers which are each specific for a different gene associated CC with lipid metabolism, synthesis or action, where each nucleic acid polymers which are each specific for a distance of the array comprises nucleic acid polymers which are specific for less CC than 100 genes other than the selected genes. The method is useful for CC than 100 genes other than the selected genes made taken from a CC patient. The present sequence represents a human lipid-associated gene CC present invention.
                                                                                                                                                                                                                        Query Match

The lyase catalyses the cleavage of Sphingosine-1-phosphate to give a long chain aldehyde and phosphoethanolamine. The sequence can form the basis of a method of treating cancers, cardiac disorders, thrombosis, atherosclerosis and other conditions. This is due to the action of Sphingosine-1-phosphate intracellularly as a secondary messenger and extracellularly as a ligand for the G-protein coupled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

```

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78233-AAM60302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

```
The invention relates to polynucleotides (AAKS1456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemmia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inflammation.

                                                                                                                                                                                                                                                                                                                               and invasiveness, while not affecting the growth of non-tumour cells. Mouse and human SPL polynucleotides (see AAX25666-67) and polypeptides (see AAX25662-27) are claimed. Methods are provided fo preparing SPL using transformed or transfected host cells. Also provided are methods for utilising SPL polypeptides for identifying agents that modulate SPL activity. An SPL inhibitor will inhibit growth of cancer cells, especially breast cancer cells. SPL inhibitors, including polynucleotides preventing expression of SPL genes, or antibodies against SPL, can also be used to prevent the development and/or metastasis of cancer, especially where the inhibitor is linked to an antitumour or antioestrogen receptor antibody. Detection of alterations in an endogenous SPL sequence can be used to diagnose cancer, and to assess the prognosis for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sphingosine-1-phosphate lyase (SPL, see AAY05826). SPL cDNA was obtained from an EST from mouse early embryonic cells. SPL catalyses the cleavage of sphingosine-1-phosphate into inactive metabolites. Sphingosine-1-phosphate is an endogenous tumour suppressor lipid that potently inhibits breast cancer cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO9916888-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sphingosine-1-phosphate lyase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        망
This is the nucleotide sequence of human cDNA coding for altered sphingosine-1-phosphate lyase (SPL, see AAYO5830). The SPL cDNA was cobtained by amplification of human gliobastoma multiforme RNA. The CC obtained by amplification of human gliobastoma multiforme RNA. The CC polypeptide sequence predicted from this SPL cDNA lacks amino acids 354-433 of SPL predicted from a clone (see AAX25567) obtained from CC fibroblast cells. Sphingosine-1-phosphate is an endogenous tumour CC suppressor light that potently inhibits breast cancer cell growth CC and invasiveness, while not affecting the growth of non-tumour CC cells. Detection of alterations in an endogenous SPL sequence, CC especially where the alteration is a deletion of residues 354-433 CC of the 568 amino acid human SPL sequence, can be used to diagnose CC cancer, and to assess the prognosis for recovery. Mouse and human CSPL polynucleotides (see AAX25666-67) and polypeptides (see AAX05826-29 are claimed. The polypeptides are used in claimed methods for cidentifying agents that modulate SPL activity. SPL inhibitors will

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABL30511), expressed DNA sequences (ABLI01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB577737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                          The invention relates to Drosophila melanogaster helicase protein, CC phosphatidylinositol transfer protein (PTP), sphingosine phosphate lyase CC (SPL) protein and their corresponding nucleic acid molecules. These CC nucleic acids and proteins are useful for genetically modifying the metazoan invertebrate organisms such as insects and worms, resulting in CC expression or mis-expression of the encoded proteins. The genetically CC modified organisms or cells are used in screening assays to identify CC candidate compounds which are potential pesticide agents or therapeutics CC that interact with subject proteins. The invention also relates to method CC compounds that have utility as pesticides. The nucleic acids are useful CC or generating mutant phenotypes in animal models or in living cells that is used for studying the regulation of proteins and use of proteins as CC pesticides and drug targets. The present cDNA sequence encodes CC Drosophila melanogaster sphingosine phosphate lyase (SPL) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                       B
                                                                                                                                                                                                                                                                                                         망
                                                                                                                                                                                                                                                                                                                                                                                                                                                             coding for sphingosine-1-phosphate lyase (SPL, see AAY05829). SPL catalyses the cleavage of sphingosine-1-phosphate into inactive metabolites. Human sphingosine-1-phosphate is an endogenous tumour suppressor lipid that potently inhibits breast cancer cell growth and invasiveness, while not affecting the growth of non-tumour cells. Mouse and human SPL polynucleotides (see AAX25666-67) and polypeptides (see AAY05826-29) are claimed. Methods for preparing SPL polypeptides using transformed or transfected host cells are provided. Human, mouse, C. elegans or yeast SPL polypeptides can be used in claimed methods for identifying agents that modulate SPL activity. SPL inhibitors will inhibit growth of cancer cells, especially breast cancer cells. SPL inhibitors, including polynucleotides preventing expression of SPL genes, or antibodies against SPL, can also be used to prevent the development and/or metastasis of cancer, especially where the inhibitor is linked to an antitumour or antioestrogen receptor antibody.

Detection of alterations in an endogenous SPL sequence can be used to diagnose cancer, and to assess the prognosis for recovery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sphingosine-1-phosphate lyase; SPL; breast cancer; diagnosis; prognosis; therapy; yeast; ss.

These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the S. cerevisiae coding sequences of the invention.

This is the nucleotide sequence of Caenorhabditis elegans cDNA coding for sphingosine-1-phosphate lyase (SPL, see AAYO5828). The SPL cDNA was obtained by systematic sequencing of the C. elegans genome. SPL catalyses the cleavage of sphingosine-1-phosphate into inactive metabolites. Human sphingosine-1-phosphate is an endogenous tumour suppressor lipid that potently inhibits breast cancer cell growth and invasiveness, while not affecting the growth of non-tumour cells. Mouse and human SPL polynucleotides (see AAX25666-67) and polypeptides (see AAX05826-29) are claimed. Method
                                                                                                                                                                                                    Saba
                                                                                                                                                                                                                                                                                                                                                                                                C. elegans sphingosine-1-phosphate lyase cDNA
                                                                                                                                          Sphingosine-1-phosphate lyase,
                                                                                                                                                                                                                                                                                                                                            Caenorhabditis

Human, mouse, C. elegans or yeast SPL polypeptides can be used in claimed methods for identifying agents that modulate SPL activity. SPL inhibitors will inhibit growth of cancer cells, especially breast cancer cells. SPL inhibitors, including polynucleotides preventing expression of SPL genes, or antibodies against SPL, can also be used to prevent the development and/or metastasis of cancer, especially where the inhibitor is linked to an antitumour or antioestrogen receptor antibody. Detection of alterations in an endogenous SPL sequence can be used to diagnose cancer, and to assess the prognosis for recovery.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA seguences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded protteins

Sequence 4, Application US/10197073 Publication No. US20030166897A1 GENERAL INFORMATION:

APPLICANT: Saba, Julie D.

```
Zhou, Jianhui
TITLE OF INVENTION: SPHINGSINE-1-PHOSPHATE LYASE
POLYVEPTIDES, POLYNUCLECTIDES AND MODULATING AGENTS AND
METHODS OF USE THEREFOR

NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSE: Seed Intellectual Property Law Group
STREET: 701 Fifth Avenue, Suite 6300
CITY: Seattle
STATE: Washington
COUNTRY: USA
ZIP: 98055
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMpatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US/10/197.073
FILING DATE: 15-Jul-2002
CLASSIFICATION: CONDAMATION:
NAME: UTVATE: J15-Jul-2002
CLASSIFICATION ONDER: 200116.402D2
TELEPHONE: (206) 622-4900
TELEPHONE: (206) 622-6031
INFORMATION INFORMATION:
SEQUENCE CHARACTERISTICS:
LENGTH: 568 anino acids
TYPE: amino acids
